M4: white = target

p(present)=0.727

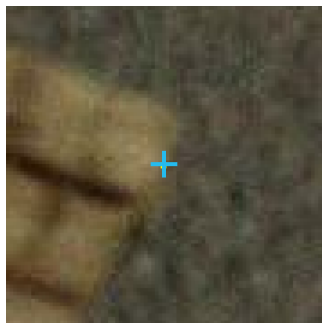

Center pixel target=0; predicted=1
CLEAR_EXTERIOR

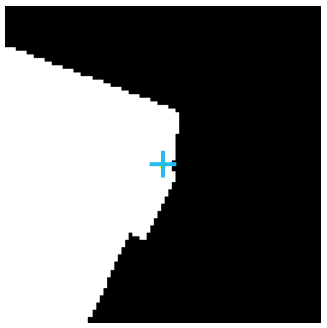

Clear FN | G38__G__f0492 / k2

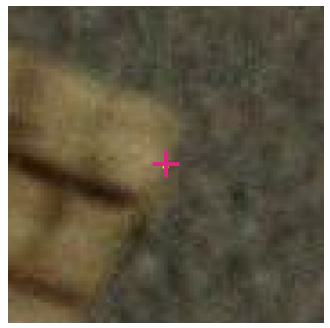

Native query crop

M4: white = target

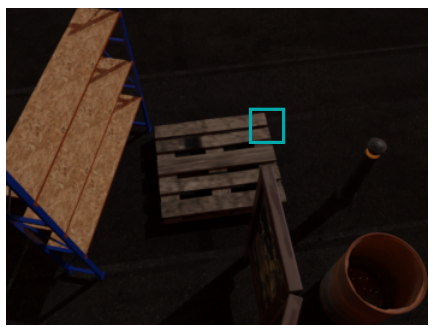

p(present)=0.349

Center pixel target=1; predicted=0
CLEAR_INTERIOR

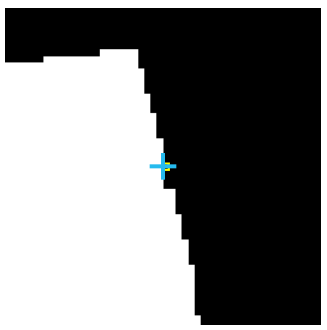

Boundary FP | G38__G__f11201 / k6

Native query crop

M4: white = target

p(present)=0.818

Center pixel target=0; predicted=1
BOUNDARY_UNCERTAIN

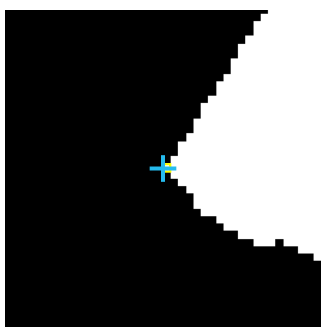

Boundary FN | G38__G__f0039 / k0

Native query crop

M4: white = target

p(present)=0.119

Center pixel target=1; predicted=0
BOUNDARY_UNCERTAIN

The single nearest pixel defines presence. Yellow 1-pixel square marks that pixel; + marks the unchanged query.
3x3 mixed support marks boundary uncertainty only; no patch-vote target. Green predicted present / magenta predicted absent.
These are target-pixel labels, not semantic-corner correctness or physical DIRECT visibility. No pose evaluation.
