All 180 prespecified paired comparisons: primary 372 images (WOOD 125)

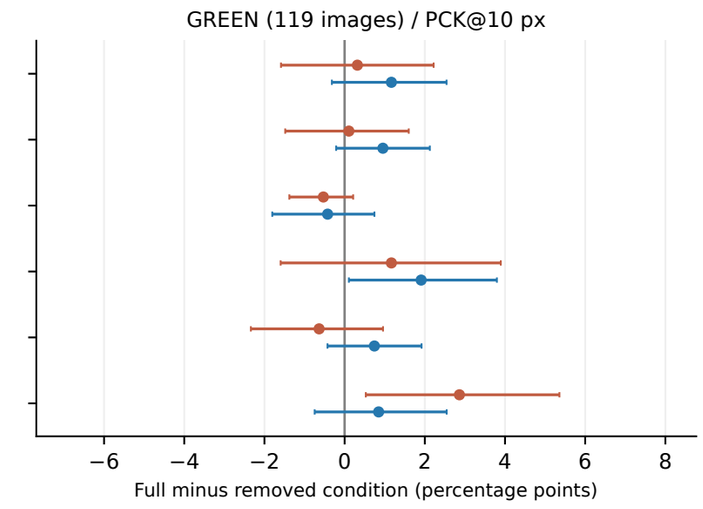

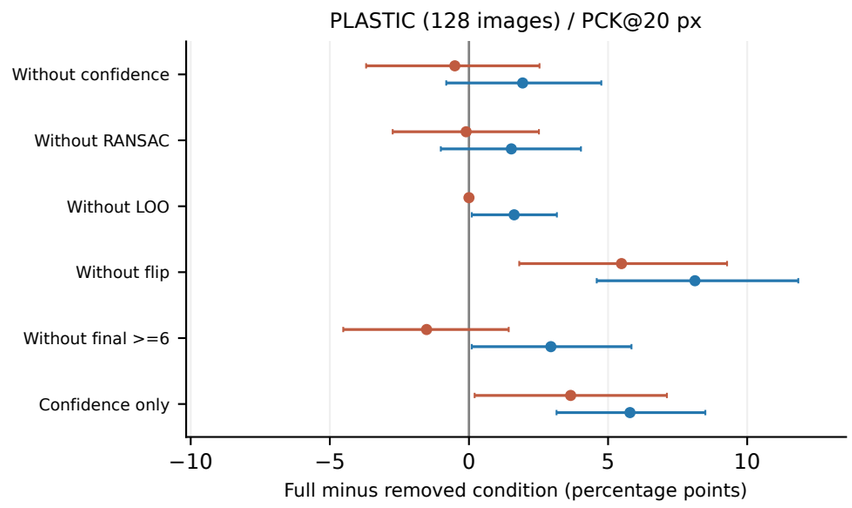

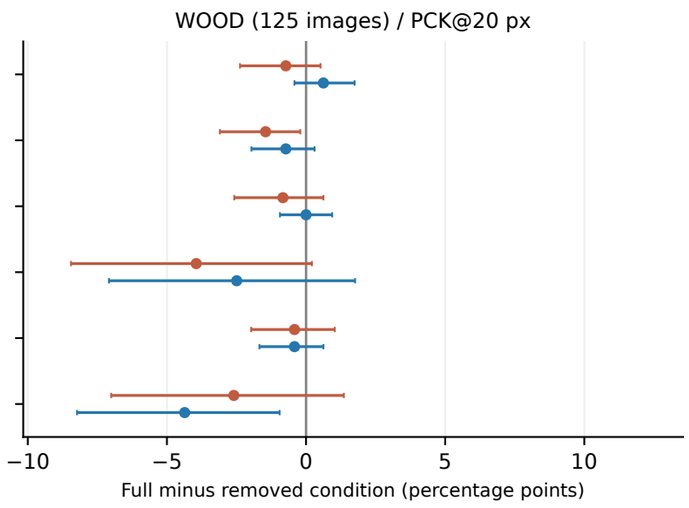

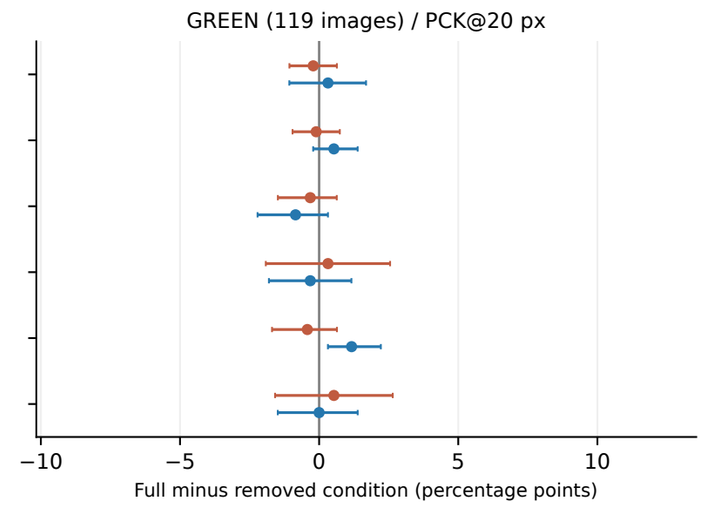

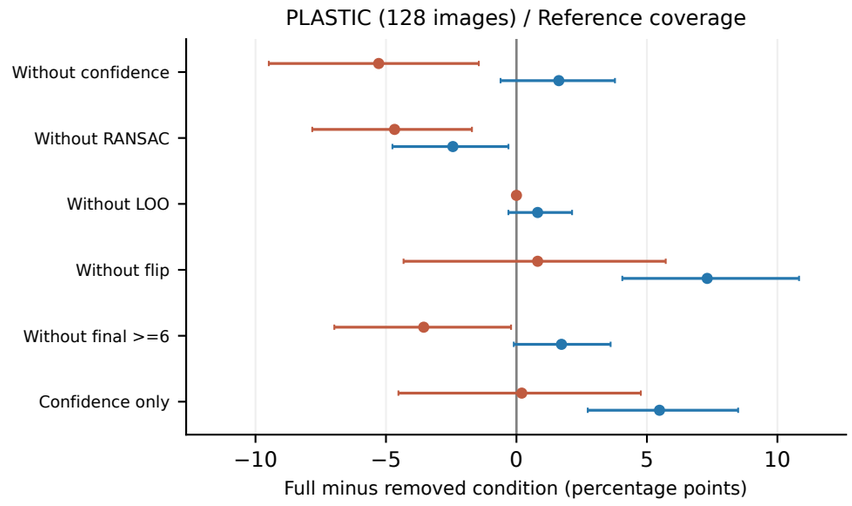

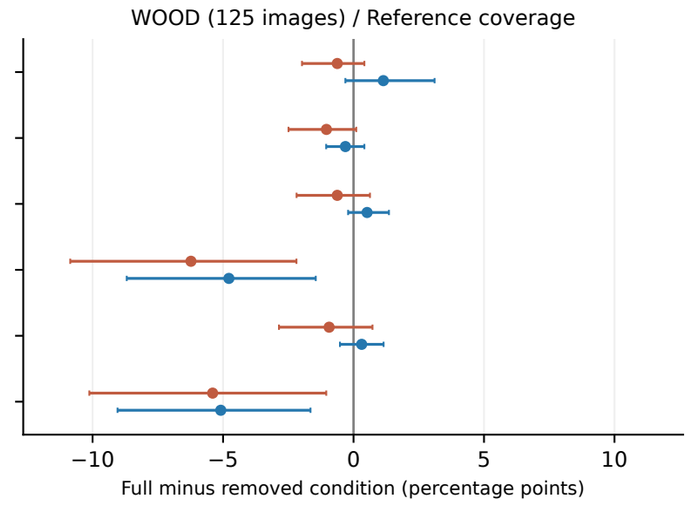

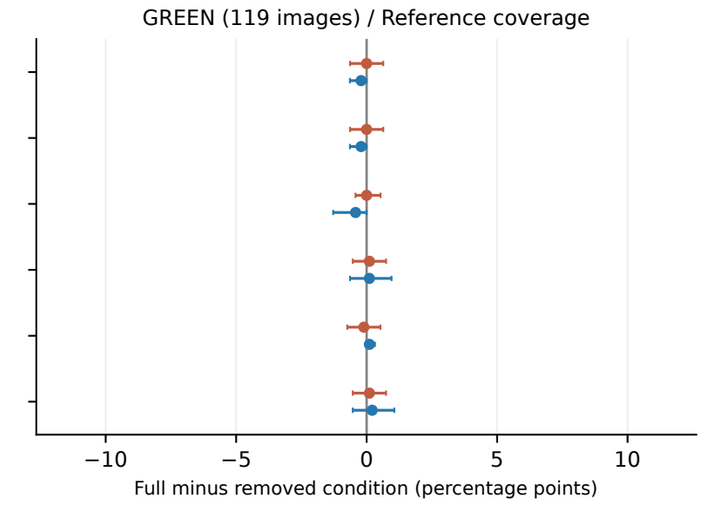

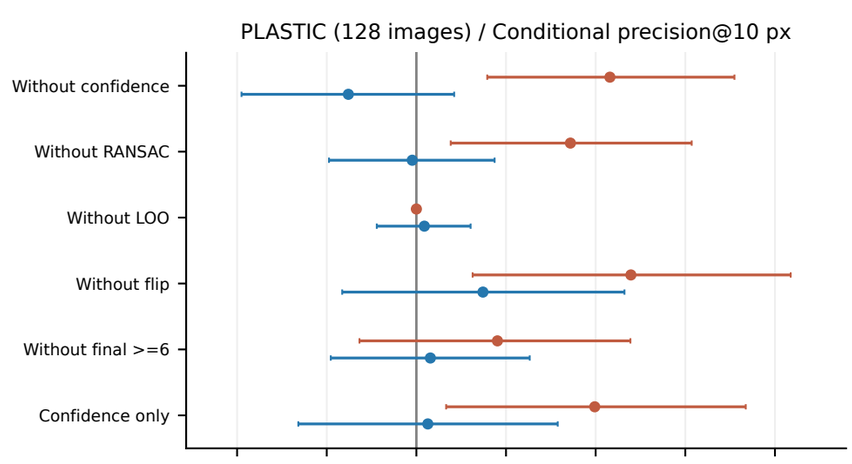

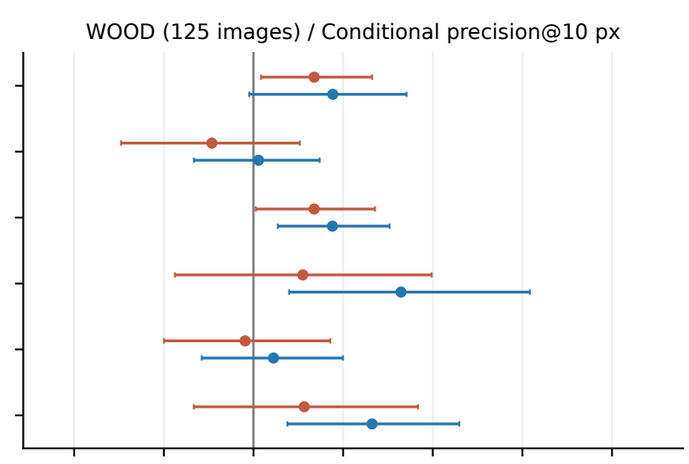

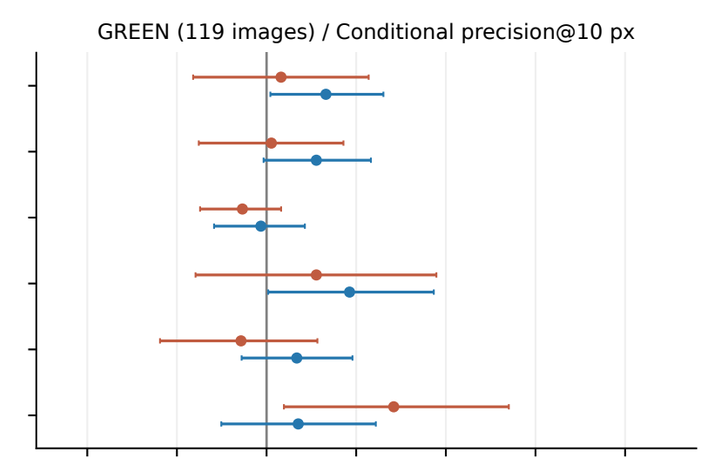

Primary evaluation: PLASTIC 128 / 985 reference points; WOOD 125 / 963; GREEN 119 / 943. Total: 372 images / 2,891 reference points.

R1 rust; R2 blue. Positive values favor full. N/A models and undefined intervals remain N/A; no comparisons are selected by outcome.

Paired-frame bootstrap: 10,000 draws; 95% percentile CI. One training seed; no multiplicity correction.

WOOD has only four known recording clusters; frame CIs are primary, not seed or recording-level uncertainty. Zero-containing CI is inconclusive.

Errors use Euclidean distance in native pixels. WOOD combines 1280 x 720 and 640 x 480 images; a fixed pixel threshold has different relative tolerance.
